EDUCATION

B.S. in Data Science & Applications | CGPA – 8.43 | **Indian Institute of Technology Madras** |2027

B.Tech in Information Technology | CGPA - 8.2 till 4th Sem | - **University of Kalyani** |2027

HSC , **Kalyani Public School** | **82%** |2023

SSC, **St. Claret School** | **91%** |2021

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS

Frontend: React.js, HTML, CSS

Backend: Node.js, Flask, RESTful API Development

Databases: MySQL, SQLite, PostgreSQL

Data Science & ML: Pandas, NumPy, scikit-learn, Exploratory Data Analysis (EDA), Feature Engineering, Model Evaluation

Data Visualization: Matplotlib, Seaborn, Plotly

Tools & Platforms: Git, GitHub, Docker, Postman, Playwright, Colab, Jupyter Notebook

Cloud & Deployment: Vercel, Render, API Deployment, CI/CD Basics

PROJECTS

Data Analyst Agent (Alvyn v2) | Python, Flask, LLMs (<https://alvyn-v2.vercel.app>)

- Designed end-to-end ETL pipelines for dynamic data ingestion and transformation
- Built and deployed a data analyst agent that dynamically scrapes, cleans, analyses, and visualizes data based on user queries
- Implemented RESTful APIs returning structured JSON responses and base64-encoded visualizations
- Deployed application on Vercel with scalable architecture
- Exposes a REST API returning structured insights, JSON outputs, and base64-encoded plot

Web Data Ingestion & Analytics Pipelines | Python, Async Scraping, REST APIs

- Built scalable data ingestion pipelines to collect structured and semi-structured data from multiple public web sources

- Automated extraction from JavaScript-heavy websites using async browser automation
- Produced structured datasets and insights for decision-making and reporting

Virtual Teaching Assistant — LLM-Powered Forum Automation | Python, Flask, OpenAI API

- Built a POST API that answers student queries using scraped IITM Discourse forum data
- Handled data scraping, preprocessing, indexing, and response generation
- Supported base64 image input and multimodal queries

Business Performance Analytics –Retail Enterprise | Python, Pandas, Matplotlib

- Analyzed operational, cost, and revenue data to identify profitability and efficiency trends
- Built data-driven models to evaluate pricing, cost structure, and monthly performance variations
- Generated actionable insights to support inventory and pricing decisions

EXPERIENCE

Data Science and AI intern at ConglomerateIT (On Site) (3 months)

- Helped automate workflows and tackle bottlenecks in the hiring process
- Worked on multiple projects and provided meaningful value and insights.
- Automated hiring workflows using Python, reducing manual processing time by 60%
- Performed data analysis to identify bottlenecks and improve recruitment efficiency
- Collaborated with cross-functional teams to implement data-driven solutions

Data Science and AI intern at CoLab (Remote) (2 months)

- Dealt mainly with data collection, cleaning and data analysis
- Updated their company website and made the backend more robust

BrewWeb Agency (Co- Founder) (<https://brew-web.vercel.app/>)

- Worked on full-stack development including frontend integration and backend API design for local cafes and restaurants
- Collaborated with clients to translate requirements into working features
- Built and deployed production-ready applications using RESTful services

STRENGTHS

- Strong data engineering fundamentals with real-world scraping experience
- Clear communicator with ability to translate data into insights
- Comfortable working in fast-paced, problem-driven environments

OTHERS

Languages: Bangla, English, Hindi

Hobbies: Gaming, Listening to Music, Cycling.
